Golden Global Yatirim Bankasi A.S.

Key Rating Drivers

Standalone Creditworthiness Drives Ratings: Golden Global Yatirim Bankasi A.S.'s (GGB) Long-Term Issuer Default Ratings (LT IDRs) are driven by its standalone strength, as reflected by its Viability Ratings (VR). The VR reflects the bank's limited franchise and lack of competitive advantage despite a longer record of stable operations. It also reflects GGB's high concentration risks, volatile profitability, risks to capitalisation and concentrated short-term wholesale funding.

Improving but Challenging Operating Environment: The normalisation of monetary policy in Turkiye has reduced near-term macro-financial stability risks and external financing pressures. However, recent political developments have increased financial market volatility, which, if sustained, could disrupt disinflation and economic rebalancing. Banks remain exposed to high inflation, potential further Turkish lira depreciation, slowing economic growth and multiple macroprudential regulations, despite simplification efforts.

Small Investment Bank: GGB is a privately owned investment bank that operates in accordance with sharia principles. It has been developing its business model and building its franchise since it was set up in 2019. The bank has a small market share (end-1H25: 0.05% of sector assets; 0.8% of development and investment banks sector assets), which results in limited pricing power.

Concentrated Financing Book: The financing book is highly concentrated by single obligor, reflecting the still small size of the bank's financing portfolio, which is represented by a small number of cash-financing and non-cash-financing clients. This is partially mitigated by the short tenor of its financing and its focus on lending to blue-chip Turkish corporates.

Risks to Asset Quality: GGB has no impaired or restructured financing. However, high concentrations, exposures to small and medium enterprises (SMEs) and rapid financing growth (1H25: 26%; 2024: 130%), albeit from a small base, present asset-quality risks. The short-term average tenor of the financing book (121 days) mitigates some of these risks. We expect limited deterioration in asset quality over the next 12 months.

Profitability Normalising: The bank's operating profit weakened but remained high at 5.7% of risk-weighted assets (RWAs) at end-1H25 (end-2024: 7.7%; end-2023: 24%), largely driven by normalising net financing margins. Trading income also remained negative, having declined from the highs of 2023 due to fewer customer-driven transactions and lower swap costs. We expect profitability to remain fairly stable, at around 4% of RWAs at end-2026.

Risks to Capital: GGB's common equity Tier 1 ratio declined to 14.7% at end-1Q25 (13.5% net of forbearance) from 15.5% at end-2024, mainly driven by tightening of forbearance and growth. Fitch views the bank's capitalisation as weak, due to rapid growth – although from a small base – high concentration risk, sensitivity to lira depreciation (as 65% of assets are denominated in foreign currencies), and the small absolute size of the capital base. Fitch expects GGB's common equity Tier 1 ratio to be 14% at end-2026.

Short-Term Wholesale Funding: The bank is entirely wholesale funded as it is an investment bank with no customer deposit licence. Funding is short term, concentrated and largely in foreign currencies, which exposes GGB to refinancing risks. However, the bank has been diversifying its funding through sukuk issuance.

Rating Sensitivities

Factors that Could, Individually or Collectively, Lead to Negative Rating Action/Downgrade

The bank's Long-Term IDRs are mainly sensitive to a downgrade of the VR.

The VR could be downgraded due to a weakening of its funding profile, given its exposure to refinancing risks. The VR could also be downgraded due to a sharp deterioration in the bank's capital ratios, for example due to a higher risk appetite or significant deterioration of asset quality and profitability.

Factors that Could, Individually or Collectively, Lead to Positive Rating Action/Upgrade

A VR upgrade would require a material strengthening of the bank's franchise and funding profile, and a decline in concentration, while maintaining adequate asset quality and profitability metrics.

Other Debt and Issuer Ratings

The bank's 'B' Short-Term IDRs are the only possible option for Long-Term IDRs in the 'B' rating category.

The bank's National Long-Term Rating of 'BB-(tur)'/Stable reflects Fitch's view of the bank's creditworthiness in local currency relative to other Fitch-rated Turkish issuers'.

GGB's Government Support Rating of 'no support' (ns) reflects Fitch's view that support from the Turkish authorities cannot be relied on, given the bank's small size and limited systemic importance.

Significant Changes from Last Review

GGB Upgraded to 'B-'

Fitch's September upgrade of GGB's IDRs and VR reflected a longer record of operations and the bank maintaining adequate profitability and asset quality in the improving Turkish operating environment.

Fitch also upgraded GGB's National Long-Term Rating following the upgrade of the bank's LT Local-Currency IDR anchor rating. This reflected a strengthening in its local-currency creditworthiness relative to other Turkish issuers', following an improvement in the business profile and continuing internal capital generation.

The Key Rating Driver (KRD) weightings used to determine the implied VR are shown as percentages at the top. In cases where the implied VR is adjusted upwards or downwards to arrive at the VR, the KRD associated with the adjustment reason is highlighted in red. The shaded areas indicate the benchmark-implied scores for each KRD.

VR - Adjustments to Key Rating Drivers

The operating environment score of 'b+' for Turkish banks is below the 'bbb' category implied score due to the following adjustment reason: macroeconomic volatility (negative), which reflects market volatility, high dollarisation and high risk of FX movements in Turkiye.

The asset quality score of 'b-' is below the implied 'bb' score due to the following adjustment reason: concentrations (negative).

The earnings and profitability score of 'b-' is below the 'bb' implied score due to the following adjustment reason: earnings stability (negative).

Company Summary and Key Qualitative Factors

Operating Environment

Turkiye's July sovereign rating affirmation at 'BB-'/Stable reflected a record of high inflation and political interference in monetary policy, low external liquidity relative to high financing requirements, and weaker governance than peers. It also reflects low government debt, a record of sustained access to external financing, a resilient banking sector and high GDP per capita.

The operating environment for Turkish banks has improved since the presidential elections in May 2023. The authorities' return to a more conventional and consistent policy mix, including progress towards normalisation of monetary policy, and simplification of macroprudential measures, has reduced macro-financial stability risks and external financing pressures. The arrest of Istanbul mayor Ekrem Imamoglu in March spurred market volatility, including a decline in international reserves, lira depreciation pressures, and higher government bond yields and credit default swap spreads.

Turkiye's economic policymakers responded by emphasising their commitment to a tight monetary policy as the Central Bank of the Republic of Turkiye (CBRT) raised the policy rate by 350bp to 46% in April 2025. Since then, the policy rate has been cut by a total of 550 bp in July and September meetings to 40.5%. Persistent or sustained episodes of market volatility could hinder disinflation and pressure the exchange rate. Fitch expects the CBRT to maintain a tight monetary stance to support disinflation with the aid of macroprudential measures, including monthly credit growth limits, and continued real appreciation of the lira – although to a lesser extent than in 2024. Fitch expects further rate cuts to reduce the policy rate to 35% by year-end. GDP growth increased to 4.8% in 2Q25, and Fitch expects this to moderate to 3.5% by end-2025. Fitch expects inflation (end-September 2025: 33%; end-2024: 44%; end-2023: 65%) to continue to decline, reaching 28% by end-2025.

We expect the policy simplification process to take time and therefore expect the regulatory environment to continue to weigh on banks' credit profiles – for instance, loan growth caps were further tightened twice in early 2025 to reduce inflationary pressures, and rollover and conversion requirements remain in place. The opening and renewal of FX-protected deposit accounts have been terminated by the CBRT, as have targets imposed for transition to lira accounts as a simplification measure. We expect regulatory forbearance on RWAs to remain, including the exchange rate used for capital adequacy calculations. However, the exchange rate that the banks are permitted to use for capital adequacy calculations has been tightened on several occasions – with the June 2024 exchange rate being used from the beginning of 2025 – which has significantly but gradually reduced the benefit to banks' reported capital ratios.

Multiple macroprudential regulations are still in place, resulting in a still-high cost of funding and expected slower GDP growth. The CBRT has recently increased the mandatory reserve requirement for FC deposits. The cost of lira-denominated deposit funding is also sensitive to depositor sentiment and has risen following episodes of market volatility. Turkish banks remain vulnerable to exchange-rate volatility and risks to FC liquidity, due to their high exposure to external FC wholesale funding and their subsequent sensitivity to investor sentiment, still-high sector FC lending, and deposit dollarisation.

Business Profile

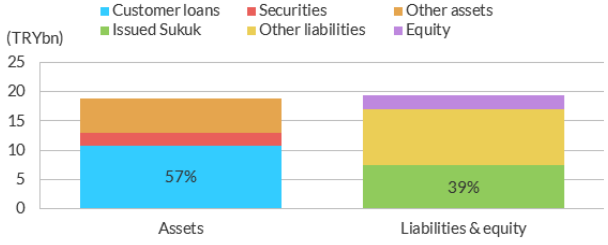

GGB provides investment banking activities in accordance with principles of Islamic finance. It began operating in June 2020 and is still growing its business model and increasing its product offering. It has limited market shares (end-1H25: 0.05% of total market assets; 0.8% of investment and development banking assets).

Financing accounted for 57% of the bank's balance sheet at end-1H25. This comprised credit to Turkish corporates, SMEs and government-owned entities. Securities accounted for 11% of total assets, almost all in the form of short-term sukuk, while interbank placements (4%) were mainly in FC and to local banks. The remaining exposures were largely cash at the central bank (22%). As an investment bank, GGB does not have a customer deposit licence, and, as such, funding is wholesale, short-term, and mainly in FC.

Income is dependent on net financing income and volatile trading income. Fees and commission income is reasonable, reflecting trade finance activities (end-1H25: 32% of total assets, almost all in the form of letters of guarantee) and cash management.

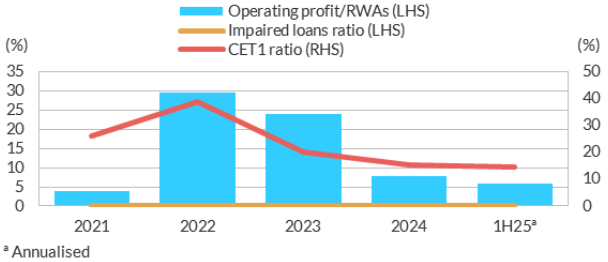

GGB consolidates a fully owned leasing subsidiary, a special-purpose entity established in 2022 to facilitate domestic sukuk issuance, although this has a negligible effect on the bank as it makes up less than 1% of total assets. The bank established a fully owned asset-management subsidiary in 2025 with the aim of establishing and managing sharia-compliant investment portfolios. GGB also became a primary dealer for the International Islamic Liquidity Management Corporation in 1Q25.

Performance Through the Cycle

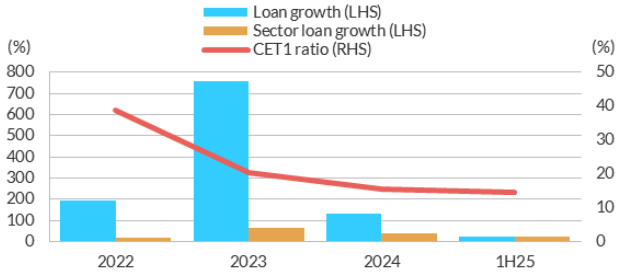

a Annualised
Source: Fitch Ratings, Fitch Solutions, GGB

Risk Profile

The financing book and off-balance-sheet exposures are highly concentrated by single-name exposures, reflecting the book's small size. Credit risk is also heightened by high FC financing (end-1H25: 52% of gross financing) and financing to SMEs (40%), a segment more vulnerable to economic downturns. However, these exposures are short-term and a significant portion of lending is to prime Turkish corporates and state-related entities, which mitigates risks.

We view the underwriting standards as reasonable for the bank's small size; however, the financing book remains largely unseasoned given the historically high growth. Non-financing balance sheet exposures are also to large Turkish companies. Similar to other Turkish banks, market risk is heightened by interest rate and exchange rate volatility in Turkiye. Interest rate risk is manageable, with a 500bp/400bp increase/decrease in lira interest rates resulting in a contained -3%/+2.7% impact on equity at end-2024. The bank maintained a minimal short FC equivalent to 0.5% of equity at end-1H25.

Loan Growth

Source: Fitch Ratings, Fitch Solutions, GGB

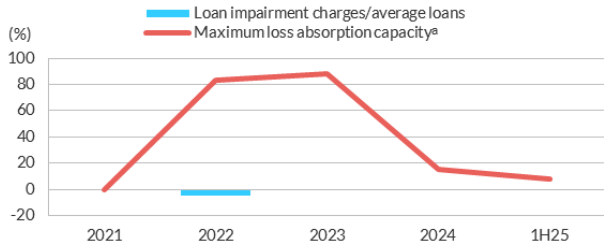

Financial Profile

Asset Quality

GGB had no Stage 3 or Stage 2 financing at end-1H25. This is largely due to its short record of operations but also supported by its financing to large Turkish corporates. Asset quality risks remain, given the concentrated financing portfolio, exposure to SMEs, and high FC financing. Financing loss allowances were limited (end-1H25: 0.03% of gross financing), reflecting the absence of impairments.

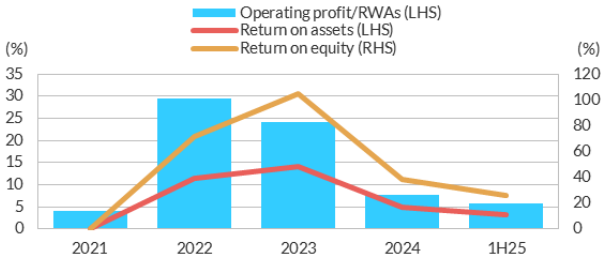

Non-financing exposures are mainly in the form of cash and balances at the central bank. The bank's securities portfolio almost entirely comprises investment-grade International Islamic Liquidity Management Corporation (ILLM) sukuk. Fitch expects a limited rise in impaired financing, and the impaired financing ratio to be 1.5% at end-2026.

P&L Loss Absorption Capacity

[a] Pre-impairment operating profit/average loans

Profitability Summary

Source: Fitch Ratings, Fitch Solutions, GGB

Earnings and Profitability

Profitability remained high in 1H25, with an operating profit/RWAs ratio of 5.7% (annualised), above the sector average of 4.3%. This was driven by net financing income that benefitted from the bank's below-sector-average cost of funding owing to the short-term, largely FC-denominated, funding structure. Net fees and commission income was reasonable, mainly reflecting trade finance and cash-management operations. Trading income remained negative (6M25: TRY284 million), reflecting swap costs.

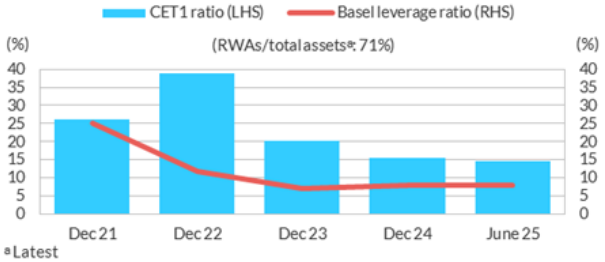

Negligible impairment charges in 6M25 also supported profitability. GGB's above-sector-average cost/average assets ratio of 6.1% (sector average: 3.4%) reflects the bank's lack of scale and the ongoing growth expenses. Profitability is sensitive to regulatory developments and asset quality risks.

Capitalisation and Leverage

GGB's common equity Tier 1 ratio declined to 14.7% at end-1H25 (13.5%, net of regulatory forbearance) from 15.5% at end-2024, largely reflecting a tightening of regulatory forbearance on FC RWAs and balance sheet growth (1H25: 19%). The bank's entire capital base consists of core capital, and therefore its total capital ratio was virtually the same at 14.7%. We view capitalisation as weak given the bank's high financing concentration, sensitivity to lira depreciation, and the small absolute size of the capital base.

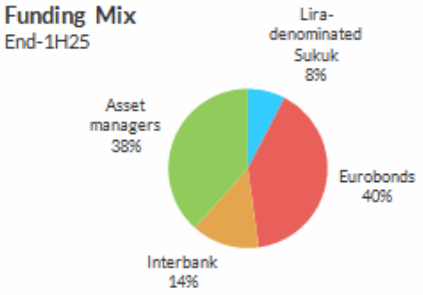

The bank's equity/assets ratio of 12.3% at end-1H25 remained above the sector average of 8.5%. Capitalisation is supported by pre-impairment operating profitability (6M25: 6% of gross financing, annualised), which provides a buffer to absorb losses through the income statement. The bank is not budgeting any core capital injections in the medium term and plans to fund growth through internal capital generation, with limited, if any, dividend distributions.

Capitalisation & Leverage Summary

Source: Fitch Ratings, Fitch Solutions, GGB

Funding Mix
End-1H25

Source: Fitch Ratings, GCB

Funding and Liquidity

GGB does not have a customer deposit licence as it is an investment bank and therefore relies on wholesale funding. The bank funds itself through short-term market borrowing, mainly in FC. Wholesale funding was TRY10 billion at end-1H25, or 56% of total assets. Short-term sukuk issued by the bank to diversify its funding comprised around one third of total liabilities at end-1H25. The remaining funding comes from local banks and local asset management companies.

Around 80% of funding at end-1H25 was due in under one year based on remaining maturities. We consider wholesale funding as potentially more volatile and as having higher refinancing risks. At end-1H25, GGB's total and FC liquidity coverage ratios were 181% and 217%, respectively.

Additional Notes on Charts

The forecasts in the charts in this section reflect Fitch's forward view on the bank's core financial metrics per Fitch's Bank Rating Criteria. They are based on a combination of Fitch's macro-economic forecasts, outlook at the sector level and company-specific considerations. As a result, Fitch's forecasts may materially differ from the guidance provided by the rated entity to the market.

To the extent Fitch is aware of material non-public information with respect to future events, such as planned recapitalisations or merger and acquisition activity, Fitch will not reflect these non-public future events in its published forecasts. However, where relevant, such information is considered by Fitch as part of the rating process.

Actual jurisdiction D-SIB GSR	b-
Government Support Rating	ns
Government ability to support D-SIBs	
Sovereign Rating	BB-/ Stable
Size of banking system	Neutral
Structure of banking system	Negative
Sovereign financial flexibility (for rating level)	Negative
Government propensity to support D-SIBs	
Resolution legislation	Neutral
Support stance	Neutral
Government propensity to support bank	
Systemic importance	Negative
Liability structure	Negative
Ownership	Neutral

The colours indicate the weighting of each KRD in the assessment.
Influence: Light blue = lower; Dark blue = moderate; Red = higher

GGB's Government Support Rating of 'no support' (ns) reflects Fitch's view that support from the Turkish authorities cannot be relied upon, given the bank's small size and limited systemic importance. Furthermore, in our view, support from the bank's shareholders while possible, cannot be relied upon.

Credit-Relevant ESG Derivation

Golden Global Yatirim Bankasi A.S. has 1 ESG rating driver and 5 ESG potential rating drivers

- Golden Global Yatirim Bankasi A.S. has exposure to board independence and effectiveness; ownership concentration; protection of creditor/stakeholder rights; legal /compliance risks; business continuity; key person risk; related party transactions which, in combination with other factors, impacts the rating.
- Golden Global Yatirim Bankasi A.S. has exposure to compliance risks including fair lending practices, mis-selling, repossession/foreclosure practices, consumer data protection (data security) but this has very low impact on the rating.
- Golden Global Yatirim Bankasi A.S. has exposure to shift in social or consumer preferences as a result of an institution's social positions, or social and/or political disapproval of core banking practices but this has very low impact on the rating.
- Golden Global Yatirim Bankasi A.S. has exposure to operational implementation of strategy but this has very low impact on the rating.
- Golden Global Yatirim Bankasi A.S. has exposure to organizational structure; appropriateness relative to business model; opacity; intra-group dynamics; ownership but this has very low impact on the rating.
- Golden Global Yatirim Bankasi A.S. has exposure to quality and frequency of financial reporting and auditing processes but this has very low impact on the rating.

G Relevance

How to Read This Page
ESG relevance scores range from 1 to 5 based on a 15-level color gradation. Red (5) is most relevant to the credit rating and green (1) is least relevant.

The Environmental (E), Social (S) and Governance (G) tables break out the ESG general issues and the sector-specific issues that are most relevant to each industry group. Relevance scores are assigned to each sector-specific issue, signaling the credit-relevance of the sector-specific issues to the issuer's overall credit rating. The Criteria Reference column highlights the factor(s) within which the corresponding ESG issues are captured in Fitch's credit analysis. The vertical color bars are visualizations of the frequency of occurrence of the highest constituent relevance scores. They do not represent an aggregate of the relevance scores or aggregate ESG credit relevance.

The Credit-Relevant ESG Derivation table's far right column is a visualization of the frequency of occurrence of the highest ESG relevance scores across the combined E, S and G categories. The three columns to the left of ESG Relevance to Credit Rating summarize rating relevance and impact to credit from ESG issues. The box on the far left identifies any ESG Relevance Sub-factor issues that are drivers or potential drivers of the issuer's credit rating (corresponding with scores of 3, 4 or 5) and provides a brief explanation for the relevance score. All scores of '4' and '5' are assumed to reflect a negative impact unless indicated with a '+' sign for positive impact.h scores of 3, 4 or 5) and provides a brief explanation for the score.

Classification of ESG issues has been developed from Fitch's sector ratings criteria. The General Issues and Sector-Specific Issues draw on the classification standards published by the United Nations Principles for Responsible Investing (PRI), the Sustainability Accounting Standards Board (SASB), and the World Bank.

CREDIT-RELEVANT ESG SCALE

How relevant are E, S and G issues to the overall credit rating?

5	Highly relevant, a key rating driver that has a significant impact on the rating on an individual basis. Equivalent to "higher" relative importance within Navigator.
4	Relevant to rating, not a key rating driver but has an impact on the rating in combination with other factors. Equivalent to "moderate" relative importance within Navigator.
3	Minimally relevant to rating, either very low impact or actively managed in a way that results in no impact on the entity rating. Equivalent to "lower" relative importance within Navigator.
2	Irrelevant to the entity rating but relevant to the sector.
1	Irrelevant to the entity rating and irrelevant to the sector.

GGB's ESG Relevance Score of '4' for Governance Structure reflects its Islamic banking nature, where its operations and activities need to comply with sharia principles and rules, which entails additional costs, processes, disclosures, regulations, reporting and sharia audit. This has a negative impact on its credit profile and is relevant to the ratings in conjunction with other factors.

GGB has an ESG Relevance Score of '3' for Exposure to Social Impacts, above sector guidance for an ESG Relevance Score of '2' for comparable conventional banks, which reflects that Islamic banks have certain sharia limitations embedded in their operations and obligations, although this only has a minimal credit impact on Islamic banks.

The highest level of ESG credit relevance is a score of '3', unless otherwise disclosed in this section. A score of '3' means ESG issues are credit neutral or have only a minimal credit impact on the entity, either due to their nature or the way in which they are being managed by the entity. Fitch's ESG Relevance Scores are not inputs in the rating process; they are an observation on the relevance and materiality of ESG factors in the rating decision. For more information on Fitch's ESG Relevance Scores, visit www.fitchratings.com/topics/esg/products#esg-relevance-scores.

SOLICITATION & PARTICIPATION STATUS

For information on the solicitation status of the ratings included within this report, please refer to the solicitation status shown in the relevant entity's summary page of the Fitch Ratings website.

For information on the participation status in the rating process of an issuer listed in this report, please refer to the most recent rating action commentary for the relevant issuer, available on the Fitch Ratings website.

DISCLAIMER & DISCLOSURES

All Fitch Ratings (Fitch) credit ratings are subject to certain limitations and disclaimers. Please read these limitations and disclaimers by following this link: https://www.fitchratings.com/understandingcreditratings. In addition, the following https://www.fitchratings.com/rating-definitions-document details Fitch's rating definitions for each rating scale and rating categories, including definitions relating to default. Published ratings, criteria, and methodologies are available from this site at all times. Fitch's code of conduct, confidentiality, conflicts of interest, affiliate firewall, compliance, and other relevant policies and procedures are also available from the Code of Conduct section of this site. Directors and shareholders' relevant interests are available at https://www.fitchratings.com/site/regulatory. Fitch may have provided another permissible or ancillary service to the rated entity or its related third parties. Details of permissible or ancillary service(s) for which the lead analyst is based in an ESMA- or FCA-registered Fitch Ratings company (or branch of such a company) can be found on the entity summary page for this issuer on the Fitch Ratings website.

In issuing and maintaining its ratings and in making other reports (including forecast information), Fitch relies on factual information it receives from issuers and underwriters and from other sources Fitch believes to be credible. Fitch conducts a reasonable investigation of the factual information relied upon by it in accordance with its ratings methodology, and obtains reasonable verification of that information from independent sources, to the extent such sources are available for a given security or in a given jurisdiction. The manner of Fitch's factual investigation and the scope of the third-party verification it obtains will vary depending on the nature of the rated security and its issuer, the requirements and practices in the jurisdiction in which the rated security is offered and sold and/or the issuer is located, the availability and nature of relevant public information, access to the management of the issuer and its advisers, the availability of pre-existing third-party verifications such as audit reports, agreed-upon procedures letters, appraisals, actuarial reports, engineering reports, legal opinions and other reports provided by third parties, the availability of independent and competent third- party verification sources with respect to the particular security or in the particular jurisdiction of the issuer, and a variety of other factors. Users of Fitch's ratings and reports should understand that neither an enhanced factual investigation nor any third-party verification can ensure that all of the information Fitch relies on in connection with a rating or a report will be accurate and complete. Ultimately, the issuer and its advisers are responsible for the accuracy of the information they provide to Fitch and to the market in offering documents and other reports. In issuing its ratings and its reports, Fitch must rely on the work of experts, including independent auditors with respect to financial statements and attorneys with respect to legal and tax matters. Further, ratings and forecasts of financial and other information are inherently forward-looking and embody assumptions and predictions about future events that by their nature cannot be verified as facts. As a result, despite any verification of current facts, ratings and forecasts can be affected by future events or conditions that were not anticipated at the time a rating or forecast was issued or affirmed. Fitch Ratings makes routine, commonly-accepted adjustments to reported financial data in accordance with the relevant criteria and/or industry standards to provide financial metric consistency for entities in the same sector or asset class.

The information in this report is provided "as is" without any representation or warranty of any kind, and Fitch does not represent or warrant that the report or any of its contents will meet any of the requirements of a recipient of the report. A Fitch rating is an opinion as to the creditworthiness of a security. This opinion and reports made by Fitch are based on established criteria and methodologies that Fitch is continuously evaluating and updating. Therefore, ratings and reports are the collective work product of Fitch and no individual, or group of individuals, is solely responsible for a rating or a report. The rating does not address the risk of loss due to risks other than credit risk, unless such risk is specifically mentioned. Fitch is not engaged in the offer or sale of any security. All Fitch reports have shared authorship. Individuals identified in a Fitch report were involved in, but are not solely responsible for, the opinions stated therein. The individuals are named for contact purposes only. A report providing a Fitch rating is neither a prospectus nor a substitute for the information assembled, verified and presented to investors by the issuer and its agents in connection with the sale of the securities. Ratings may be changed or withdrawn at any time for any reason in the sole discretion of Fitch. Fitch does not provide investment advice of any sort. Ratings are not a recommendation to buy, sell, or hold any security. Ratings do not comment on the adequacy of market price, the suitability of any security for a particular investor, or the tax-exempt nature or taxability of payments made in respect to any security. Fitch receives fees from issuers, insurers, guarantors, other obligors, and underwriters for rating securities. Such fees generally vary from US$1,000 to US$750,000 (or the applicable currency equivalent) per issue. In certain cases, Fitch will rate all or a number of issues issued by a particular issuer, or insured or guaranteed by a particular insurer or guarantor, for a single annual fee. Such fees are expected to vary from US$10,000 to US$1,500,000 (or the applicable currency equivalent). The assignment, publication, or dissemination of a rating by Fitch shall not constitute a consent by Fitch to use its name as an expert in connection with any registration statement filed under the United States securities laws, the Financial Services and Markets Act of 2000 of the United Kingdom, or the securities laws of any particular jurisdiction. Due to the relative efficiency of electronic publishing and distribution, Fitch research may be available to electronic subscribers up to three days earlier than to print subscribers.

For Australia, New Zealand, Taiwan and South Korea only: Fitch Australia Pty Ltd holds an Australian financial services license (AFS license no. 337123) which authorizes it to provide credit ratings to wholesale clients only. Credit ratings information published by Fitch is not intended to be used by persons who are retail clients within the meaning of the Corporations Act 2001.

Fitch Ratings, Inc. is registered with the U.S. Securities and Exchange Commission as a Nationally Recognized Statistical Rating Organization (the "NRSRO"). While certain of the NRSRO's credit rating subsidiaries are listed on Item 3 of Form NRSRO and as such are authorized to issue credit ratings on behalf of the NRSRO (see https://www.fitchratings.com/site/regulatory), other credit rating subsidiaries are not listed on Form NRSRO (the "non-NRSROs") and therefore credit ratings issued by those subsidiaries are not issued on behalf of the NRSRO. However, non-NRSRO personnel may participate in determining credit ratings issued by or on behalf of the NRSRO.
